

## **Installation instructions:**

After downloading the Level Tools program file, you may extract the zip file and copy the LevelTools64.cde (or LevelTools32.cde ) and the LevelLicense.xml file into your KeyCreator™ CDE directory (or any directory of your choice). It is important to always have the LevelToolsXX.cde and the LevelLicense.xml in the same directory. Otherwise the program will not run.

Start KeyCreator™ , go to the default menu bar and select:

Add-Ins – CDE Open – select the LevelTools64.cde (or LevelTools32.cde ) and click the Open button. The program will allow you to start a 30 day trial version.

Please be advised that the license validation for the trial version will access the internet for a time validation, this may cause a delay when loading the CDE (license validating screen appears for up to 20 seconds or so). However, this will not happen with the licensed version, neither does the licensed version need access to the internet, once is it registered.

This program is compiled and tested for KeyCreator™ version 13.5 .
